* Clinical evidence demonstrates superior outcomes for patients who complete a course of NeuroStar therapy compared to those who do not complete treatment. However, the actual number of sessions performed is subject to the medical judgment of the prescribing physician. The number of treatment sessions performed is not a selection criteria for entry into the Better Me Guarantee Program and will not be used as a basis to remove a provider from the program.

Indication:

The NeuroStar[®] Advanced Therapy System is indicated for the treatment of depressive episodes and for decreasing anxiety symptoms for those who may exhibit comorbid anxiety symptoms in adult patients suffering from Major Depressive Disorder (MDD) and who failed to achieve satisfactory improvement from previous antidepressant medication treatment in the current episode. The NeuroStar Advanced Therapy system is intended to be used as an adjunct for the treatment of adult patients suffering from Obsessive-Compulsive Disorder (OCD).

Safety:

The most common side effect is pain or discomfort at or near the treatment site. These events are transient; they occur during the TMS treatment course and do not occur for most patients after the first week of treatment. There is a rare risk of seizure associated with the use of TMS therapy (<0.1% per patient).

Visit neurostar.com for full safety and prescribing information.
